CORRELATOR3D VERSION 10.4

These release notes provide information on the latest posting of SimActive's industry-leading software, Correlator3D™. The software was further enhanced to provide the highest level of precision, performance and reliability.

NEW FEATURES:

- 3D model generation: 3D models can now be created from a point cloud. (Version 10.4.0)
- DSM generation: When generating a point cloud, a DSM optimized for true orthorectification is now created. (Version 10.4.0)
- Flightline editing: Polygonal selection is now supported for easier editing. (Version 10.4.0)
- Project Creation: Automated (smart) oblique captures are now supported. (Version 10.4.0)

BUG FIXES:

- Fixed an issue where creating a satellite project could fail. (Current Release - Version 10.4.1)
- Resolved an issue where the boundaries of a 3D model were unnecessarily filled. (Current Release - Version 10.4.1)
- Minor adjustments made to LAS file import handling. (Current Release - Version 10.4.1)
