

CORRELATOR3D VERSION 10.2

These release notes provide information on the latest posting of SimActive's industry-leading software, Correlator3D™. The software was further enhanced to provide the highest level of precision, performance and reliability.

NEW FEATURES:

- Mosaic Editing: A new seamline structure was implemented. (Current Release - Version 10.2.0)
- Mosaic Editing: The new feature "Ortho Patch" allows a specific ortho to be picked to patch a mosaic. (Current Release - Version 10.2.0)
- Mosaic Editing: Mosaics are now automatically updated when saving changes to seamlines. (Current Release - Version 10.2.0)
- Mosaic Editing: Users can now edit multiple seamlines before saving changes. (Current Release - Version 10.2.0)
- Mosaic Editing: Ortho contours are now displayed when editing a seamline. (Current Release - Version 10.2.0)
- Mosaic Editing: Users can now move intersections of more than two seamlines. (Current Release - Version 10.2.0)
- Mosaic Editing: Users can toggle between ortho and mosaic views. (Current Release - Version 10.2.0)
- Mosaic Editing: Users can toggle the seamline display. (Current Release - Version 10.2.0)
- Mosaic Editing: Undo and redo functionalities were added for seamless editing. (Current Release - Version 10.2.0)

- Point Cloud Filtering: Elevation-based filtering was added. (Current Release - Version 10.2.0)
- Point Cloud Filtering: Area-based filtering was added. (Current Release - Version 10.2.0)
- Display: Vulkan is now used to render 3D data, enhancing performance and visualization. (Current Release - Version 10.2.0)

ENHANCEMENTS:

- Mosaic Creation: The general quality of the mosaic has been improved. (Current Release - Version 10.2.0)

BUG FIXES:

- Various bug fixes. (Current Release - Version 10.2.0)
